

## Perio days at Srní

### ***The traditional meeting of dentists and periodontologists took place at Srní, the West Bohemia, 19 - 20 May, 2017 organized by the Czech Periodontology Society.***

The first day programme was started by the lecture of Dr. Moshe Goldstein, Israeli, on the topic: „Periimplantitis, complications, implants´failures in the esthetic region, how to solve it.“ We could see the modern methods of implantology and periodontology treatment.

Dr. Goldstein described his casuistics very clearly and carefully, the access, the process of solving and the therapy too.

The lecture´conclusion was that the number of implants is permanently increasing and unfortunately, the number of complications (and failures) is increasing too.

The afternoon programme was presented Dr. Radochová, Hradec Králové, by her lecture on the topic:

The contemporary view of the white lesions of the oral mucosa.

Some other interesting facts were presented such as some antimicrobial agents (Listerine, etc.) can imitate the leukoplakias= white lesions.

Dr. Doc. R.Slezák, Hradec Králové, followed with:

Immunopathology diseases with the associated lesions on the oral mucosa.

He showed the overview of the oral mucosa lesions with the immunopathology background.

Dr. Šembera continued with the lecture:

Unusual lesion of lip.

Then followed the last lecturer from Hradec Králové of the day, Dr. I. Dřížhal:

Is it possible to change the access to the Periodontology therapy?

There was presented by the interesting form the cooperation among periodontologists and dental hygienists.

The second day programme:

Dr. H. Poskerová, Brno, the topic:

Diabetes mellitus and the oral cavity.

There were some interesting facts presented, i.e.:

The Periodontitis, non treated, means the etiology risk factor for DM, the second type.

Very really interesting lecture was the presentation of Dr. J. Klimeš, Praha, Behavior, manipulations, examples, studies, etc.

Of course, we are in contact with people permanently so we need to know some patterns of human behavior.

Dr. P. Augustin, Brno, followed:

The virus diseases with the lesions on the oral mucosa.

He stressed f. e. that exist some risks of antiviral therapy, so an experienced periodontology therapist with the cooperations of some other doctors could do this.

The scientific meeting was finished by Dr. Doc. A. Mahelová, Hradec Králové,:

The Diabetes mellitus from the point of view of professional diabetologist.

New medicine agents were presented, such as gliptins, glifozin, etc.

Unfortunately, the number of new DM cases is increasing and the treatment is quite expensive. Obesity, the style of life, the eating habits, the lack of physical activity, these are negative factors in our society.

The Perio days at Srní confirmed not only the high level of scientific and society level of these meetings but also the fact of traditionally great interest of dentists, periodontologists as to these events.

The next perio days will be held in Ostrava, 13 – 14 October, 2017.

The main speaker will be Dr. W. Westermann, Germany.
