

18.-19.5.2018 the Congress of the Czech Periodontology Society took place in beautiful environment of the Hotel Horal Orea at Špindlerův Mlýn, that is a widely known summer and winter resort in the Czech Republic.

This time a two day meeting started unusually. First there was the memory of deceased Dr. Jan Vokurka. The minute of silence and a short recall of this outstanding man, very valuable professionally and humanly.

First lecturer was an excellent european peridontologist:

prof. Mariano Alonzo Sainz from Spain, Madrid.

The topic of his lecture was: "Plastic Periodontal Surgery".

He aimed for evaluation some different techniques of solving gingival recessions. He showed clinical casuistics in detail. Also he presented some surgery approaches step by step. The comparison of methods, coronally advanced flap, envelope method, laterally advanced flap, grafts, tunnelling techniques, etc. Everything was accompanied by detailed indication schemes with a clear explanation advantages and disadvantages of methods. The audience appreciated this lecture very high because it was so understandable and accurate that nearly it was possible to take a scalpel and start working.

Another lecturer was Dr. Gabriela Dostálová/VFN Praha/, with the topic:

What can dentist expect from cardiologist?

First she said in a comprehensive way about the options of therapy approaches in Cardiology and then how are the right procedures when preparing a patient in risk before dental surgery and periodontal surgery too.

Dr. Michal Kania/Ostrava/ followed with:

What bring the cooperation dentist and oral hygienist?

The author showed some undoubtedly advantages which this cooperation means, but also some disadvantages exist. Yes, the team work, a significant help of dental hygienists during the hygiene therapy means a lot.

But recently we have noticed an increasing number of cases rather to be „cosmetically“ called. And sorry to say, without the proper cooperation with a periodontologist with a following care.

Similar topic Dr. Martin Starosta /Olomouc/ continued:

„The status of Dental Hygienist (DH) in the dental team“

The lecturer evaluated advantages of this cooperation too. But then he concentrated on the law rules explaining which must be respected by the DH and which are quite obligatory. The surveillance of a periodontologist in some cases is given by the law and is without discussions.

If this rule not respected the law is broken.

The second day Dr. Martin Tomeček started with the topic:

„ Emergence profile-the area of nobody“.

In his presentation, in some casuistics, he showed how necessary is to keep the right procedures when inserting the implants, providing augmentations and the following prosthetic reconstructions aiming for the best esthetic outcomes.

The accurate work of implantologist and laboratory prosthetic worker, their mutual cooperation, step by step implantology procedures, these are conditions for providing the best outcomes.

Another lecture by Dr. Ivo Dřížhal /Hradec Králové/:

„The cooperation periodontologist and orthodontist“.

The lecturer presented some casuistics, showing how useful and effective this cooperation can be when dealing with some most difficult cases.

The two days scientific meeting was finished by Dr. Jeroným Klimeš/Praha/
„The Partner relationship in the office“. The lecturer stressed the necessity of the unselfish approach when solving relation crisis. He showed with a joking, humouros way the options of solving and mainly how to prevent and stop these situations.

Again the Perio days at Špindlerův Mlýn confirmed the high scientific and society level of these meetings but also confirmed the reality of great interest doctors –dentists, not only periodontologists.

The next Peridontology days will take place at Dolní Morava, Moravia,

5. - 6. 10. 2018.
